                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic nurrous.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          components
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents an osteoclastogenesis inhibitory (OCIF)-binding molecule (OBM). The protein promotes and supports separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 28; Pages 119-120; 151pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is human osteoprotegerin (OPG) binding protein.
CC Host cells transfected with vectors containing nucleic acid molecules
CC encoding OPG binding protein are used to produce recombinant OPG binding
CC protein. OPG binding protein is used in binding assays to determine
CC protein. OPG binding protein is used in binding assays to determine
CC binding agents (particularly agonists and antagonists, including
CC intracellular proteins); to raise Ab (useful in immunoassays for
CC detection of OPG binding protein) and to identify compounds that
CC modulate binding of OPG binding protein to scheoclast differentiation
CC and activation receptor (ODAR). The nucleic acid molecule encoding OPG
CC binding protein can be used to detect OPG binding protein-encoding
CC sequences, e.g. screening for related sequences, also to produce
CC transgenic animal models, while complementary sequences are used for
CC off binding protein, particularly soluble forms of OPG binding protein
CC or Ab, are used to treat or prevent bone diseases, e.g. osteoporosis,
CC disease, periodontal disease, osteoporosis, loosening of prostheses,
CC disease, periodontal disease, osteoporosis, loosening of prostheses,
CC optionally in combination with agents that promote bone growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (gOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-KB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of can also be used to identify inhibitors of RANK and thus inhibitors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This represents a human RANKL, a ligand for the RANK (receptor activator of necrosis factor-kappaB (NF-kB) polypeptide. RANK is a member of the tumour necrosis factor (TNF) family. A soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds tRANK ligand (RANKL). RANKL polypeptides can activate RANK and can be used to induce maturation of dendritic cells and enhance their

RANK is a member of the tumour necrosis factor (TNF) family. Host cells transformed or transfected with an expression vector comprising the RANK encoding nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to RANK ligand (RANKL). The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for alsease characterised by neoplastic cells that express RANK. The products

Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastogenesis in a dose dependent manner. The OPGL protein is synthesised as a type II transmembrane protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. It is not capable of inducing osteoclast differentiation in the absence of CSF-1. OPGL is also an activator of mature osteoclasts. The specification describes a method for the in vivo down-regulation of OPGL activity in an animal. The method comprises using at least one OPGL polypeptide or subsequence, and/or at least one OPGL analogue to induce an immune response in the animal. The method and OPGL polypeptide are useful for treating, preventing and ameliorating osteoporosis or other diseases or conditions characterised by excessive bone resorption.
                                                                                                                                                                                      Human receptor activator of NF kappaB ligand (RANKL) protein.

                                                                                                                                                                                                                                                                                                                                                                                                       CC are useful for regulating immune response and in screening for inhibitors CC of these receptors. The cytoplasmic domain of RANK is used in developing CS assays for inhibitors of signal transduction, e.g. for screening the CC molecules that inhibit interaction of RANK with TRAFI TRAF2, TRAF3, CC TRAF5 and particularly TRAF6. NF kappaB inhibition by RANK antagonists CC are useful in ameliorating the negative effects of an inflammatory CC response that result from triggering of RANK, e.g. in treating toxic reactions and the effects of bone resorption. RANK acts as an anti-CC shock or sepsis, graff-versus-host reactions, acute inflammatory CC reactions and the effects of bone resorption. RANK acts as an anti-CC soluble forms of the receptor are used in vivo or in vitro based CC screening tests for agonists of antagonists of RANK activity, as CC antagonists of RANK-mediated NF-kappa B activation, or to inhibit CC transduction of a signal via RANK. RANK compositions are used in the CC development of both agonistic and antagonistic antibodies, or as an CC adjunct therapy for disease characterised by neoplastic cells that CC express RANK. Compounds that interfere with RANK/TRAF6 interactions CC are useful for modulating osteoclast function and activities. They care useful for the expression of recombinant proteins, as probes for analysis of the presence or distribution of RANK transcripts, while the proteins CC are useful in preparing kits for the detection of soluble RANK, or CC monitor RANK-related activity. The present sequence is RANK ligand CC (RANKL) protein from human.
                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses novel receptor activator of nuclear factor (NF)-
kappaB (RANK) proteins and their corresponding DNAs. RANK is a member
of the tumour necrosis factor (TNF) receptor superfamily and associates
with TNF receptor associated factor (TRAF) 2 and 3 which are important
in the regulation of immune and inflammatory response. The receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New receptor activator of NF-kappaB (RANK) polypeptides, useful for regulating immune response, in screening for RANK inhibitors, or as adjunct therapy for disease characterized by neoplastic cells that express RANK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to receptor activator of NF-chi B (RANK) DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to chromosome 13q14. RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2 and TRAF3. The DNA molecules are useful for producing ligands of RANK. The ligands are useful for regulating immune response and in screening for inhibitors of RANK. The present sequence is human RANKL (hurankkl)

                                                                                                                     δδ
                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a novel receptor, referred to as RANK CC (receptor activator of NF (nuclear factor)-kappaB), a member of TNF CC (tumour necrosis factor) receptor superfamily. RANK is a Type I CC transmembrane protein that interacts with TNF receptor-associated CC factors (TRAFs). Triggering of RANK by overexpression or co-expression of RANK and membrane bound RANK ligand (RANKL) results in upregulation of factor (TRAFs). Triggering of RANK by overexpression or co-expression of that is most extensively utilised in cells of the immune system.

CC Inhibition of Nf-kappaB by RANK antagonists is useful in ameliorating consertive effects of inflammatory reactions, and the effects of excess bone resorption. The RANK DNAs, proteins and their analogues are useful for the preparation of pharmaceutical compositions, for infecting target cells for use in gene therapy applications in diagnosing diseases associated with RANK, and as targets for use in screening assays. They may be used in the treatment or diagnosis of immune system dysfunction. The present invention also encompasses gene therapy methods to correct consecutivating mutations, associated with e.g. familial expansile costeolysis (FEO) and early onset Paget's disease of bone (EP). The present amino acid sequence is full-length human RANKL (huRANKL) correct protein. The RANKL gene is located in chromosome 13q14.
                                                                                                                                                                                                                                                Matches

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-09-880-457-1_COPY_543_746

It indicates an insertion within the locus defined by clone MCL19. The sequences are generated at the MPI for Plant Breeding Research in the context of the Gabl-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
details.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                     CC The invention relates to one hundred and twenty two nucleic acids CC encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides CC encode human secreted proteins. The PRO nucleic acids, polypeptides, CC The PRO polypeptides are useful for treating a PRO related disorder. CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or CC civer tumour. The PRO polypeptides are useful for stimulating the CC the proliferation of, or gene expression, in pericyte cells, for stimulating the CC the proliferation or differentiation of chondrocyte cells, for CC concern the PRO polypeptides are useful for stimulating the CC the proliferation or differentiation of chondrocyte cells, for CC containing the release of tumour necrosis factor alpha from human blood, CC contains the PRO polypeptide may also be used as molecular cCC dibroblast cells. The PRO polypeptide may also be used as molecular cCC applications in molecular biology, including use as hybridisation probes, CCC end in chromosome and gene mapping. ABK33536-ABK33657 represent human cCC contains and for tissue typing. The PRO nucleic acids have cCC and in chromosome and gene mapping. ABK33536-ABK33657 represent human cCC contains coding sequences of the invention.

It exists in a full-sequence used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO9828426-A2
                                                                                                                             This cDNA encodes a human RANKL, a ligand for the RANK (receptor a activator of necrosis factor-kappaB (NF-kB)) polypeptide. RANK is a activator of the tumour necrosis factor (TNF) family. A soluble RANK member of the tumour necrosis factor (TNF) family. A soluble RANK with a soluble rank which binds to expressing membrane-associated RANK with a soluble RANK which binds to expressing membrane-associated RANK with a soluble RANK and can be RANK ligand (RANKL). RANKL polypeptides can activate RANK enhance their used to induce maturation of dendritic cells and enhance their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-DEC-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease can also be used to identify inhibitors of RANK RANKL Polypeptides an inflammatory response, and also for protecting RANK-expressing cells from the negative effects of chemotherapy or the presence of high levels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This cDNA encodes a human RANKL, a ligand for the RANK (receptor CC activator of necrosis factor kappab (NF-kB)) polypeptide. RANK is a CC member of the tumour necrosis factor (TNF) family. Host cells transformed CC nucleic acid can be used to produce recombinant RANK protein. The soluble CC RANK may be used for inhibiting activation of NF-kB, by contacting a cell CC expressing membrane-associated RANK with a soluble RANK which binds to CC used for regulating an immune or inflammatory response. Inhibition of CC Used for regulating an immune or inflammatory response. Inhibition of CC of an inflammatory response that result from triggering of RANK, e.g. in CC inflammatory reactions. They can also be used in adjunct therapy for can also he used to repulsatic cells that express RANK. The products

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US6242213-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-JUN-2001
                                                                                                                                                                                                                                                                                  The present invention relates to receptor activator of NF-chi B (RANK) DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to proteins respectively. RANK is a member of the tumour necrosis factor proteins respectively. RANK is a member of the tumour necrosis factor (TRY) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2 region. RANK associates with TNF receptor producing ligands of RANK and TRAF3. The DNA molecules are useful for producing ligands of RANK associates with TNF resembles CD40 in the strategies of RANK. The present sequence is human RANKL (huRANKL) for inhibitors of RANK. The present sequence is human RANKL (huRANKL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-DEC-1996;

CC The present invention relates to a novel receptor, referred to as RANK CC (receptor activator of NF (nuclear factor)-kappaB), a member of TNF (tumour necrosis factor) receptor superfamily. RANK is a Type I CC factors (TRAFs). Triggering of RANK by overexpression or co-expression CC of RANK and membrane bound RANK by overexpression or co-expression CC of the transcription factor NF-kappaB, a ubiquitous transcription factor CC that is most extensively utilised in cells of the immune system.

CC inhibition of Nf-kappaB by RANK antagonists is useful in ameliorating cc negative effects of inflammatory reactions, and the effects of excess CC for the preparation. The RANK DNAs, proteins and their analogues are useful cells for use in gene therapy applications in diagnosing diseases CC may be used in the treatment or diagnosis of immune system dysfunction. The present invention also encompasses gene therapy methods to correct CC osteolysis (FEO) and early onset paget's disease of bone (FEO). The present-sequence is a cDNA encoding full-length human RANKL (hurannel).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a new method of treating a mammal having a disorder comprising insufficient or excessive cartilage or skeletal growth. The method of the invention involves administering to the mammal a tumour necrosis factor-related activation induced cytokine (TRANCE)-modulating agent. The method is useful for treating a mammal (TRANCE)-modulating and insufficient or excessive cartilage or skeletal growth, where the disorder comprising insufficient cartilage or skeletal growth is selected from dwarfism, osteopetrosis, cranifesom from the selected from dwarfism osteopetrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  resulting from traumatic injury, surgery, osteoarthritis or rheumatoid arthritis, and disorders comprising excessive cartilage or skeletal growth are selected from acromegaly, gigantism, exostosis, carilaginea, exostosis bursata and multiple osteocartilaginous exostoses. The method is useful for inhibiting chondrocyte differentiation. The present nucleic acid sequence encodes the human TRANCE protein, splice variant 2, of the invention. TRANCE is a member of the tumour necrosis factor family and acts directly on cartilage-producing cells (chondrocytes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating mammal having disorder characterised by abnormal cartilage/skeletal growth such as dwarfism, acromegaly, by administering tumour necrosis factor related activation induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig 3; 55pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytokine-modulating agent to mammal -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the mammal a tumour necrosis factor related activation induced cytokine (TRANCE)-modulating agent. The method is useful for treating a mammal having a disorder comprising insufficient or excessive cartilage or skeletal growth, where the disorder comprising insufficient cartilage or skeletal growth is selected from dwarfism, osteopetrosis, or skeletal growth is selected from dwarfism, osteopetrosis, craniofacial skeletal discrepancies and bone or cartilage damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cartilage/skeletal growth such as dwarfism, acromegaly, by administering tumour necrosis factor related activation induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating mammal having disorder characterised by abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-304119/34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Choi Y, Odgren PR,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 resulting from traumatic injury, surgery, osteoarthritis or rheumatoid arthritis, and disorders comprising excessive cartilage or skeletal growth are selected from acromegaly, gigantism, exostosis, carilaginea, growth are selected from acromegaly, gigantism, exostoses. The method exostosis bursata and multiple osteocartilaginous exostoses. The method is useful for inhibiting chondrocyte differentiation. The present nucleic acid sequence encodes the human TRANCE protein, splice variant nucleic acid sequence encodes the human TRANCE protein, splice variant 1, of the invention. TRANCE is a member of the tumour necrosis factor 1, of the art after the control of the sequence encodes the human trance of the tumour necrosis factor 1, of the art after the control of the sequence encodes the human trance of the tumour necrosis factor 1, of the art after the control of the sequence encodes the sequence of the tumour necrosis factor 1, of the art after the control of the sequence encodes the sequence of the tumour necrosis factor 1, of the sequence encodes the sequence of the tumour necrosis factor 1, of the sequence encodes the sequence of the sequence of the sequence encodes the sequence of the sequence 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Fig 1; 55pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytokine-modulating agent to mammal -

                                                                                                                                                                                                                                                                                                       protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. It is not capable of inducing osteoclast differentiation in the absence of CSF-1. OPGL is also an activator of mature osteoclasts. The of CSF-1 operation describes a method for the in vivo down-regulation of PPGL activity in an animal. The method comprises using at least one OPGL an immune response in the animal. The method and OPGL analogue to induce useful for treating, preventing and ameliorating osteoporosis or other

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a human osteoprotegerin ligand (OPGL). Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastogenesis in a dose dependent manner. The OPGL protein is synthesised as a type II transmembrane

cc encoding Opg binding protein are used to produce recombinant Opg binding components of protein is used in binding assays to determine cc protein. Opg binding protein is used in binding assays to determine cc binding agents (particularly agonists and antagonists, including cc detection of Opg binding protein); to raise Ab (useful in immunoassays for modulate binding of Opg binding protein to osteoclast differentiation cc and activation receptor (ODAR). The nucleic acid molecule encoding Opg Sequences, e.g. screening for related sequences, also to produce cc antisense regulation of Opg binding protein expression. Modulators of Opg binding protein particularly soluble forms of Opg binding protein bone diseases, e.g. osteoporosis, optionally in combination with agents that promote bone growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other bladders such as neuronal, glial, astrocytal, hypothalamic, glandular, disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and anglogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human PRO polymentides of the terminal produces and anglogenic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the coding sequence for rat Osteoclast Differentiation Factor (ODF). ODF is thought to be directly involved in Osteoclasts promote dissolution of monocytes/macrophages into osteoclasts. Osteoclasts promote dissolution of the bone matrix and solubilisation of bone salts. The present sequence is useful in gene therapy, and as activity of cells, e.g., cell proliferation, cell differentiation and as vaccines. Anti-rat ODF antibodies are useful in assay methods for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              restriction digest
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Unresolved tandem repeat from base position 181200 to 187300. Size information from restriction digest suggests that the full repeat may not be represented.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The clone sequenced to the left is RP11-521D12. Actual start of this clone is at base position 1 of RP11-95D17; actual end is at base position 190748 of RP11-95D17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    There are polymorphic base differences between RP11-95D17 and the redundant clone AC062035. Data from AC062035 was used to finish
